Patient information for the following tests:

Test	What it does	What you need to do
ECG	An easy way to record the way your heart beats.	No preparation required.
Echocardiogram	Non-invasive way of assessing the way your heart functions.	No preparation required.
Holter	This monitor can record the way your heart beats over 24 hours. It is worn on a belt or shoulder strap during most of your normal activities except during a shower.	No preparation required. You will be reminded to return the monitor the next day.
Exercise Stress Test	A non-invasive test to assess the way your heart responds to exercise.	Please refrain from having a heavy meal prior to the test. Comfortable clothes and shoes are recommended.
Exercise Stress Echocardiogram	A non-invasive test to assess the way your heart responds to exercise and a echocardiogram to increase sensitivity of the test.	Please refrain from having a heavy meal prior to the test. Comfortable clothes and shoes are recommended.
24 hour ambulatory blood pressure monitoring	This monitor can record your blood pressure over 24 hours. It is worn on a belt around your arm during most of your normal activities except during a shower.	No preparation required. You will be reminded to return the monitor the next day.
